

Netvite® clamp system

Netvite is a unique system that is quick and easy to install using bolted clamp couplings. Similarly, the clamp couplings can easily be demounted so that piping can be repositioned or reused.

The clamp is manufactured from a tough, lightweight reinforced polypropylene and will withstand harsh, corrosive environments. The fittings are manufactured using either PVC-U or reinforced Polypropylene (for this range see PE section). Fittings are available with clamp connections so that the clamp can be bolted directly to the end without the need for pipe (see 2, 3, 5 and 6). They are also manufactured with solvent sockets or BSP threads to enable transition between the clamp system and pipe.

- 1 Pipe
- 2,3,5,6 Netvite system 90° elbow
- 4 Netvite system butterfly valve
- 7 Pipe
- 8 Netvite system check valve
- PVC-U socket x PE spigot
- 9 PE spigot

Butterfly valves, check valves and sight glasses are produced with clamp connections, allowing direct connection to clamp fittings.

The clamp system is pressure rated for use at a continuous working pressure of 10 bar at 20°C.
