### Hot-Tap Saddles

Spears Hot-Tap Saddles allow connection to an existing pipeline under pressure. Simply bolt the saddle on to the existing pipe and connect the branch piping. The brass or stainless steel cutter is screwed through the pipe wall (the special design captures and retains the disc from the hole), then withdrawn allowing an unrestricted flow through the branch.

The maximum working pressure is:

2" to 4"	16 bar
6"	14 bar
8"	10 bar
