

Unplasticised Polyvinyl Chloride (PVC-U) is the most widely used of all plastics used for pipe installations. It is rigid, versatile, and is suitable for both above or below ground installations.

It has excellent chemical resistance which, when combined with smoothness of bore, eliminates build up of scale and gives good flow characteristics. It is odourless and tasteless, and is suitable for conveying potable water and many food or dairy products.

PVC-U is suitable for use at temperatures from 0°C to 60°C at a wide range of operating pressures, depending upon the system chosen. It is lightweight and easy to install, using cold solvent welded joints which require no special tools.

## application guide

- Temperature range 0°C to 60°C
- Abrasion resistant
- Non-toxic and taint free
- Rigid pipes - no special support needed
- Ideal for above and below ground use
- Resistant to many inorganic chemicals
- Threading possible
- Resistant to most solutions of acids, alkalis and salts
- Sizes from 1/4" to 24" and 10mm to 630mm
- No special tools required for installation
- Jointing by cold solvent welding or rubber ring mechanical joints
- Not resistant to aromatic and chlorinated hydrocarbons

## standards and approvals

We offer a wide range of systems to leading international standards:

# about: pvc-u

Unplasticised Polyvinylchloride (PVC-U) is one of the oldest and most widely used plastics for piping systems worldwide. It is a versatile material that is used for both pressure and drainage piping systems for above and below ground applications. It has good tensile, flexural and mechanical strength, low moisture absorption, good flammability characteristics, and exceptional dimensional stability.

PVC-U has excellent chemical resistance across its operating temperature range of 0°C to 60°C, with a broad band of operating pressures. PVC-U systems are very cost-effective and typically account for a large proportion of thermoplastic piping installations.

PVC-U systems feature the widest range of pipe sizes, fitting configurations, valve choices and ancillary items compared to all other thermoplastic piping materials.

PVC-U piping systems are joined by solvent cement welding, whilst transition joints can be made using flanges, threaded connections, mechanical fittings, and compression fittings.

PVC-U piping systems are available from IPS in both inch and metric dimensions, according to BS, ASTM and ISO standards. Systems are available in inch sizes up to 24", and metric sizes up to 630mm. Pipes, fittings and valves are available in grey, white and clear PVC-U.

## General properties of PVC-U

PVC-U is thermally stable in the temperature range 0°C to 60°C, however at low temperatures the impact strength of PVC-U decreases. It is therefore not recommended for use at very low temperatures unless there is no likelihood of the piping materials being disturbed or subjected to impact damage. PVC-U is free from toxic metals thus ensuring that it is physiologically harmless for drinking water and foodstuffs applications.

Some important advantages of PVC-U are:

- Extensive choice of component parts
- Wide range of applications
- Good chemical and corrosion resistance
- Safe for potable water applications
- Low friction loss
- Self extinguishing
- High mechanical strength
- Simplified installation techniques using solvent cement welding
- Approved for potable water applications

## Characteristics

### Chemical resistance

PVC-U has excellent chemical resistance to common industrial chemicals such as acids, bases and salt solutions. Resistance to sodium hypochlorite solutions is also very good. PVC-U is not resistant to aromatic and chlorinated hydrocarbons, solvents, esters and ketones. The chemical resistance should be checked with our technical department for applications involving varnish, oils or fats, and PVC-U is not recommended for use with compressed air or gases.

### Chemical resistance of solvent cement welded joints

The chemical resistance of the joints in a solvent welded piping system are the same as the material itself. However, PVC-U solvent welded joints in systems handling the following chemicals can be degraded and require the use of Weld On 724 solvent cement to ensure chemical compatibility:

Hydrochloric Acid 25%+ concentration  
Nitric Acid 20%+ concentration  
Sulphuric Acid 70%+ concentration  
Hydrofluoric Acid in any concentration

### Weathering resistance

With the use of additives such as ultraviolet absorbers, PVC-U systems display excellent weathering resistance to the long-term effects of sunlight, wind and rain. Over time, grey PVC-U will lose some of its colour because of exposure to UV light, and it will have slightly reduced impact strength. In extreme cases, the use of insulation or an application of a UV absorbent coating such as AGRU Coat, or the use of a water or latex based paint will help to minimise the effects of solar radiation. Solvent based paints should not be used on PVC-U piping. For outdoor installations, or where the aesthetic appearance of the piping system is important, a fully matched system of UV stabilised white PVC pipes and fittings is also available.

### Electrical characteristics

PVC-U is non-conductive, therefore systems will remain free from electrolytic corrosion. Precautions should be taken to avoid static discharge should any part of a PVC-U piping system pass through an area where explosive gases may be present.

### Physiological characteristics

PVC-U piping systems from IPS are free from lead, cadmium or other poisonous heavy metals. They are suitable for use in contact with cold potable water, and are WRAS listed for this application.

## Pressure ratings for pvc-u systems

### Maximum continuous pressure ratings

Pipes, fittings and valves are designed to operate continuously for 50 years at their maximum rated pressure at 20°C as follows, unless otherwise stated.

#### Inch sizes - ASTM Standard

PVC-U piping systems manufactured in accordance with ASTM requirements use a 'schedule' system of pressure ratings. Pipes are produced in three different 'schedules', 40, 80 & 120. Under this system the pressure rating of the pipe changes according to the pipe nominal bore size. Reference should be made to the pipe availability guide to verify the pressure ratings available for the sizes required.

Unlike pipe, there is presently no industry standard that specifies a working pressure for fittings. Moulded pipe fittings are manufactured to meet the minimum burst pressure requirements to that of schedule 40 and schedule 80 pipe. In common with the pipe, the pressure rating of the fittings decreases as the nominal pipe sizes increases. The advisory pressure ratings for ASTM fittings is as follows:-

| Industrial Range |  | Size Range    | Max. Operating Pressure |
|------------------|--|---------------|-------------------------|
|                  |  | 1/4" to 12"   | 15 Bar*                 |
|                  |  | 14" to 24"    | 10 Bar                  |
|                  | NPT Reinforced Threaded                    | 1/4" to 4"    | 15 Bar                  |
|                  | NPT Unreinforced Threaded                  | 1/4" to 4"    | 12 Bar                  |
|                  | * Reduced margin of safety for 10" and 12" |               |                         |
| Standard Range   |  | Size Range    | Max. Operating Pressure |
|                  |  | 1/2" to 11/2" | 15 Bar                  |
|                  |  | 2" to 6"      | 12 Bar                  |
|                  |  | 8"            | 9 Bar                   |
|                  |  | 10" & 12"     | 8 Bar                   |
|                  | NPT Reinforced Threaded                    | 1/4" to 4"    | 12 Bar                  |
|                  | NPT Unreinforced Threaded                  | 1/2" to 4"    | 10 Bar                  |

#### Inch sizes - European Standard

PVC-U pipes according to BS/EN 1452 (formerly BS 3505/6) and PVC-U fittings according to BS 4346 use the 'class' system of pressure rating their components. Regardless of size, pipes and fittings are rated for use at a maximum working pressure according to the 'class'. Care must be taken to ensure that the integrity of the system is not compromised through the incorrect match of pipes and fittings from different pressure 'classes'. The pressure ratings of inch sized PVC-U pipes and fittings according to the European standard is as follows:-

| Pipe     | Class  | Size Range   | Max. Operating Pressure               |
|----------|--|--------------|---------------------------------------|
|          | PN9 (Class C)  | 2" to 12"    | 9 Bar                                 |
|          | PN12 (Class D)   | 11/4" to 6"  | 12 Bar                                |

#### Metric sizes

The pressure ratings for PVC-U pipes according to EN 1452 or DIN 8062 and PVC-U fittings according to DIN 8063 are defined by the 'nominal pressure' method, whereby pipes, fittings and valves are grouped together according to a single nominal pressure rating. The PN rating is the maximum permitted operational pressure in bars calculated at 20°C, for example PN6 indicates a maximum working pressure of 6 bars. Reference should be made to the pipe availability guide to verify the pressure ratings available for the pipe sizes required. The pressure ratings of metric sized PVC-U fittings is as follows:-

| Industrial Range | Size Range     | Max. Operating Pressure |
|------------------|----------------|-------------------------|
|                  | 10mm to 160mm  | 16 Bar                  |
|                  | 200mm to 450mm | 10 Bar                  |
|                  | 500mm          | 6 Bar                   |
| Standard Range   | Size Range     | Max. Operating Pressure |
|                  | 20mm to 225mm  | 10 Bar                  |
|                  | 250mm to 400mm | 6 Bar                   |

## Making a solvent welded joint - joint preparation

- ① Bring the pipes, fittings and solvent cements to the same temperature condition. Ensure that the items to be joined are clean and dry prior to use. Inspect the components for any signs of damage or irregularities. Do not use items that appear not to be correct.
- ② Cut the pipe ends squarely using tool suitable for plastic pipe. A wheel-type cutter is ideal. If a saw is used, a mitre box is recommended to ensure a square cut. Power saws may be used with care.
- ③ Using a chamfering tool cut a 10° to 15° chamfer on the outside of the pipe. This will help ease the pipe into the fitting and minimise the risk of cement being wiped from the fitting during assembly.
- ④ Remove the internal burr from the pipe, and clean up any cutting debris or swarf.
- ⑤ Check the dry fit by entering the pipe into the fitting. The pipe should enter the socket of the fitting to between 1/3 to 3/4 of its depth. This is regarded as a good "interference fit". If the pipe bottoms in the fitting with little interference, extra solvent cement should be used during assembly.
- ⑥ Measure the insertion depth of the socket and mark it on the pipe end. This makes it possible to verify later that the pipe has completely "bottomed out" in the fitting.
- ⑦ Open cans of cleaner, primer and cement ready for use and loosely replace lids to minimise the evaporation of the solvents. Check that the products are in good condition and not "gelled". Cements that are gelled must not be used. Never thin cements.
- ⑧ If needed, remove dirt with C-65 cleaner applied using a clean, lint-free cloth or paper towel.
- ⑨ Using a natural bristle brush or an applicator, apply P70 primer to the inside of the fitting socket then to the outside of the pipe, then apply a further coat to the fitting socket. The primer should be worked into the surfaces of the material. Avoid 'puddling' the primer in the fitting socket. Do not apply with a rag.
- ⑩ **While the primer is still wet**, apply the solvent cement using a natural bristle brush of the correct diameter, or a correctly sized applicator. The solvent cement coating on the pipe end should be liberally yet evenly applied to a distance equal to the depth of the fitting socket. A medium even coat should be made on the fitting socket surface. For diameters 4" (100mm) and above, or if the fit was loose, a second coat should be applied to the pipe.
- ⑪ **While both surfaces are still wet**, insert the pipe into the fitting until the pipe bottoms out fully in the socket. Check that alignment is correct. Hold the joint to prevent pull out for around 20 to 30 seconds (larger sizes may require more time). A bead of solvent cement should be evident around the pipe and fitting juncture. If the bead is not continuous it may indicate that insufficient solvent cement was applied. If this is the case the joint must be cut out, discarded and begun again with new product. Excess solvent cement should be removed from the mouth of the socket using a clean, dry cloth. Replace lids on cleaner, primer and cement cans to prevent the solvent from evaporating.
- ⑫ Handle the newly assembled joint with care until the initial set time has elapsed (see set and cure times table). Following the initial set period the assembly can be handled carefully, avoiding stresses on the joint. **All solvent cemented joints must be allowed to cure fully prior to pressure testing.**

## Set and cure times

The initial set between the pipe and the fitting takes place in a matter of minutes, and joints can therefore safely be handled in a very short time. However, the joint needs to cure before it can be used as part of a pressurised assembly. The time taken to achieve this can depend upon a number of factors, including the tightness of fit as well as the ambient temperature and humidity. In general terms, joints will cure faster on tighter fitting assemblies in warmer, drier conditions, whereas looser fit joints made in cooler and/or humid conditions will cure slower.

As a general guide it is recommended that (wherever possible) joints be left for 24 hours to cure before pressure is applied. However, where this is not possible, consideration may be given to the above factors before determining when joints are put into service. Given average conditions and a working temperature not exceeding 20°C, a safe guide is to allow a cure time of not less than 1 hour for each bar of working pressure for pipe sizes up to 4" (100mm), and 1½ hours for each bar of working pressure for larger sizes.

## Large diameter jointing

Solvent cement jointing on pipe sizes 6" (DN 150mm) and larger is a two-person operation. To ensure that primers and solvent cements are applied at the correct speed they should be simultaneously applied to both pipe and fitting. Applying a thorough coating of cement is critical at these sizes both to ensure a good weld and to ease the pipe into the fitting.

For sizes 10" and larger it is recommended to use a ratchet driven pipe puller to ensure that the pipe fully penetrates the fitting. These tools may be hired if required.

## One-step cements

Specially formulated PVC-U solvent cements are available to provide solutions to specific applications or to solve installation difficulties. Examples include transition cements to make joints between flexible and rigid PVC, and Wet 'R Dry, a product designed to make solvent welded joints in wet conditions and/or where quick pressurisation of the system is required.

One-step cements do not require the use of a primer in the welding process and generally work best on pipe sizes up to 3" (DN 65). In all cases, strictly follow the instructions supplied with the product.

## Chemical resistance of solvent welded joints - Important Note

A well-made solvent cement welded joint will provide excellent chemical resistance characteristics, in the same way as that of the parent piping material. However solvent welded joints in systems handling the following chemicals can be degraded and require the use of Weld-On 724 solvent cement to ensure chemical compatibility:-

Hydrochloric Acid 25%+ concentration

Nitric Acid 20%+ concentration

Sulphuric Acid 70%+ concentration

Hydrofluoric Acid all concentrations

## Solvent welding of dissimilar materials

As a general guide, solvent welded joints between dissimilar materials are not recommended. Where possible, a mechanical transition joint should be used, such as a union, flange or threaded connection.

If a solvent welded joint is unavoidable, it may (depending upon the conditions) be possible to make a reliable joint provided that a suitable solvent cement is used:

| Materials To Be Joined | Recommended Solvent Cement |
|------------------------|----------------------------|
| PVC-U to PVC-C         | Weld-On 724                |
| PVC-U to ABS           | Weld-On 719                |

**Please note that in all cases we recommend contact with our technical department who will be able to provide assistance with specific applications and on recommended jointing methods.**

## Pipework Support

PVC-U pipework requires more support than for metallic systems. As working temperature increases, the distance between supports is reduced. At 60°, continuous support is required.

## Temperature De-Rating Factors

Pressure ratings for PVC-U pipework systems are always quoted at 20°C. As working temperature increases, the maximum working pressure decreases by the factor indicated.

| Working Temperature (°C) | Pressure De-Rating Factor |
|--------------------------|---------------------------|
| 20                       | 1.00                      |
| 30                       | 0.80                      |
| 40                       | 0.58                      |
| 50                       | 0.39                      |
| 60                       | 0.22                      |

# Standard & industrial pipe fittings

All WELD-ON  
cements, primers and  
cleaning fluids are now  
LOW VOC

Covering a huge range of sizes - from 1/4" to 16" (up to 24" on special request), in a choice of pressure ratings from 6 bars to 15 bars, IPS provide a multitude of fitting types to make even the most complicated installation easy.

Inch sized fittings are dimensionally matched for use with inch size pipes to BS EN1452/2, or ASTM D1785 and D2241 and are pressure rated for continuous use up to 15 bars in accordance with the test requirements of BS EN1452/1.

## How much Solvent Cement?

Estimate the number of joints per size, then use this table to calculate how much solvent cement to order.

| inch dia  | mm dia  | joints per litre |
|-----------|---------|------------------|
| 1/4 - 1/2 | 10-20   | 160              |
| 3/4 - 1   | 25-30   | 120              |
| 1 1/4 - 2 | 40-63   | 80               |
| 2 1/2 - 3 | 75-90   | 60               |
| 4         | 110     | 40               |
| 5-6       | 140-160 | 24               |
| 8         | 200-225 | 12               |
| 10        | 250-280 | 4                |
| 12        | 315     | 2                |

Larger sizes on request.  
You will require approximately half as  
much cleaner and primer.

## Brushes

### Solvent Welding Large Size Fittings

For solvent cement joints in sizes 6" and above, we strongly recommend the use of primer as part of a three stage jointing process. This provides the additional lubrication necessary to ensure the pipe reaches the bottom of the socket. Ratchet driven pipe pullers are also helpful for large size joints - see Tools section.

## Flange Pressure Ratings

Not all PVC-U flanges carry the same pressure rating as the pipe.

This is the maximum working pressure of the flange at 20°C:-

BS 10 Table D: 100 psi (6.9 bar)

BS 10 Table E: 200 psi (13.8 bar)

BS 4504 EN1072 PN10: 10 bar

BS 4504 EN1072 PN16: 16 bar

ANSI 150: 10 bar

Take care to select the correct flange for the job.

**Making Threaded Joints**

We recommend the use of PTFE tape or Blue 75 Joint Compound for all threaded joints on plastic piping. Please check with our technical department before using any other type of pipe joint compounds, as these can cause stress cracking and lead to failure of the system.

When using PTFE tape, follow the following guidelines:

- Always wrap tape clockwise
- Apply 2 to 3 wraps
- Tighten hand-tight plus 1 1/2 to 2 turns
- Do not overtighten

## Netvitc clamp system inch sizes

2

### Netvitc® clamp system

Netvitc is a unique system that is quick and easy to install using bolted clamp couplings. Similarly, the clamp couplings can easily be demounted so that piping can be repositioned or reused.

The clamp is manufactured from a tough, lightweight reinforced polypropylene and will withstand harsh, corrosive environments. The fittings are manufactured using either PVC-U or reinforced Polypropylene (for this range see PE section). Fittings are available with clamp connections so that the clamp can be bolted directly to the end without the need for pipe. They are also manufactured with solvent sockets or BSP threads to enable transition between the clamp system and pipe.

Butterfly valves, check valves and sight glasses are produced with clamp connections, allowing direct connection to clamp fittings.

The clamp system is pressure rated for use at a continuous working pressure of 10 bar at 20°C.

# flexible pipe and fittings inch and mm sizes

## flexfit® pvc-u

2

Flex Fit is designed to enable secure leak-tight joints to be made in flexible PVC systems.

The Flex Fit system uses special compression fittings which give secure connections to other flexible pipes as well as rigid PVC-U or threaded joints, for example at pumps.

The pipe is manufactured in 50mm or 63mm sizes, and Flex Fit fittings are available to connect to both inch or mm sized rigid PVC-U fittings as well as BSP threads.

# clear pipe and fittings inch sizes

## clear pvc-u

**Clear PVC-U is ideal for a wide range of Applications:**

- in laboratories, for a wide range of chemicals
- in food and pharmaceutical processing, with the backing of FDA approval
- in chemical processing, for resistance to a wide range of acids and mineral oils
- in photofinishing systems, where the material will not interact chemically with most solutions
- in electroplating, for complete visual control and protection. Harvel Clear is non-conductive
- WRAS listed for use in contact with cold potable water

# hose insert fittings

Spears hose insert fittings are designed for use with flexible PVC and Polyethylene pipes. Pipes should be fixed in place using an external clamp or clip over the barbed ends, to eliminate seepage.

Please note that a transportation surcharge may be applied on pipe diameters 280mm or larger - please enquire for details.

## Pipework Support

PVC-U pipework requires more support than for metallic systems. As working temperature increases, the distance between supports is reduced. At 60°C, continuous support is required.

## Temperature De-Rating Factors

Pressure ratings for PVC-U pipework systems are always quoted at 20°C. As the working temperature increases, the maximum working pressure decreases by the factor indicated.

| Working<br>Temperature (°C) | Pressure<br>De-Rating Factor |
|-----------------------------|------------------------------|
| 20                          | 1.00                         |
| 30                          | 0.80                         |
| 40                          | 0.58                         |
| 50                          | 0.39                         |

### Industrial vs Standard Range

Industrial range fittings are engineered to meet the most demanding applications. Standard range fittings are designed for applications handling water or weak chemicals. Pressure ratings and standards:

#### Industrial Range

Size 10mm-160mm PN16 at 20°C  
Size 200mm-450mm PN10 at 20°C  
Size 500mm PN6 at 20°C

#### Standard Range

Size 20mm-140mm PN16 at 20°C  
Size 160mm-400mm PN10 at 20°C

## fittings mm sizes

# standard and industrial pipe fittings

Photo: Chlor Generators Ltd

Available in a wide range of mm sizes from 10mm to 500mm, and in a choice of pressure ratings from 6 bars to 16 bars, the range offers a wide selection of products to fulfil applications ranging from irrigation to chemical process systems.

MM sized fittings meet the requirements of DIN 8063, and are produced from tin based stabilised compounds as required for potable water applications.

### How much Solvent Cement?

Estimate the number of joints per size, then use this table to calculate how much solvent cement to order.

| inch dia  | mm dia  | joints per litre |
|-----------|---------|------------------|
| 1/4 - 1/2 | 10-20   | 160              |
| 3/4 - 1   | 25-30   | 120              |
| 1 1/4 - 2 | 40-63   | 80               |
| 2 1/2 - 3 | 75-90   | 60               |
| 4         | 110     | 40               |
| 5-6       | 140-160 | 24               |
| 8         | 200-225 | 12               |
| 10        | 250-280 | 4                |
| 12        | 315     | 2                |

Larger sizes on request.  
You will require approximately half as much cleaner.

### Brushes

## Netvitic® clamp system

Netvitic is a unique system that is quick and easy to install using bolted clamp couplings. Similarly, the clamp couplings can easily be demounted so that piping can be repositioned or reused.

The clamp is manufactured from a tough, lightweight reinforced polypropylene and will withstand harsh, corrosive environments. The fittings are manufactured using either PVC-U or reinforced Polypropylene (for this range see PE section). Fittings are available with clamp connections so that the clamp can be bolted directly to the end without the need for pipe (see 2, 3, 5 and 6). They are also manufactured with solvent sockets or BSP threads to enable transition between the clamp system and pipe.

Butterfly valves, check valves and sight glasses are produced with clamp connections, allowing direct connection to clamp fittings.

The clamp system is pressure rated for use at a continuous working pressure of 10 bar at 20°C.

# Praher S4 Ball Valve

Lockable Handle Tagging Point

Valve Bracket Actuation

### Features

- WRAS approved for contact with potable water
- Lockable Handle (Lock not supplied)
- True Union design for easy maintenance
- Full bore design
- Tagging point included
- Matched Valve bracket for panel mounting and retrofit actuation.
- Pneumatically and Electrically actuated versions available - please see actuated valve section, starting page 131
- Silicone free on request

### Materials

Body - PVCu  
Ball Seat - PTFE  
Seals - EPDM or FPM

### Sizes

3/8" - 4"/16mm - 110mm

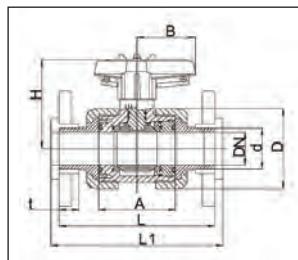

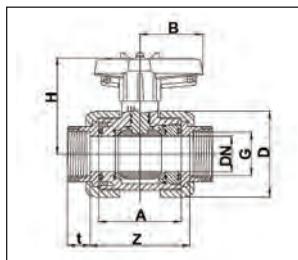

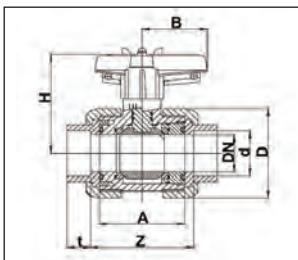

### Pressure Rating

3/8"/16mm to 2.1/2"/75mm - 16 bar  
3"/90mm - 10 bar  
4"/110mm - 6 bar

### Connections

Solvent Cement Sockets  
Solvent Cement Spigots

## Praher Type S4 Ball Valve

**Description:** In-line double union ball valve with lockable handle

**Mounting:** In any position

**Maximum Fluid Pressure at 20°C:** Sizes 3/8"/16mm to 2 1/2"/75mm - 16 bar; 3"/90mm

- 10 bar; 4"/100mm - 6 bar

**Fluid Temperature Range:** 0°C - 60°C

**Construction:**

**Body:** PVC-U

**Seals:** EPDM or FPM

**Seats:** PTFE

**End Connections:** Solvent Sockets, Solvent Spigots, BSP Female Threaded, HDPE Socket Ends, HDPE Fusion Spigots, Flanged PN10 or ANSI 150

**Option:** Silicon-free

**Features:** Lockable handle and tagging point included

# Safi Manual 2-Way Ball Valve

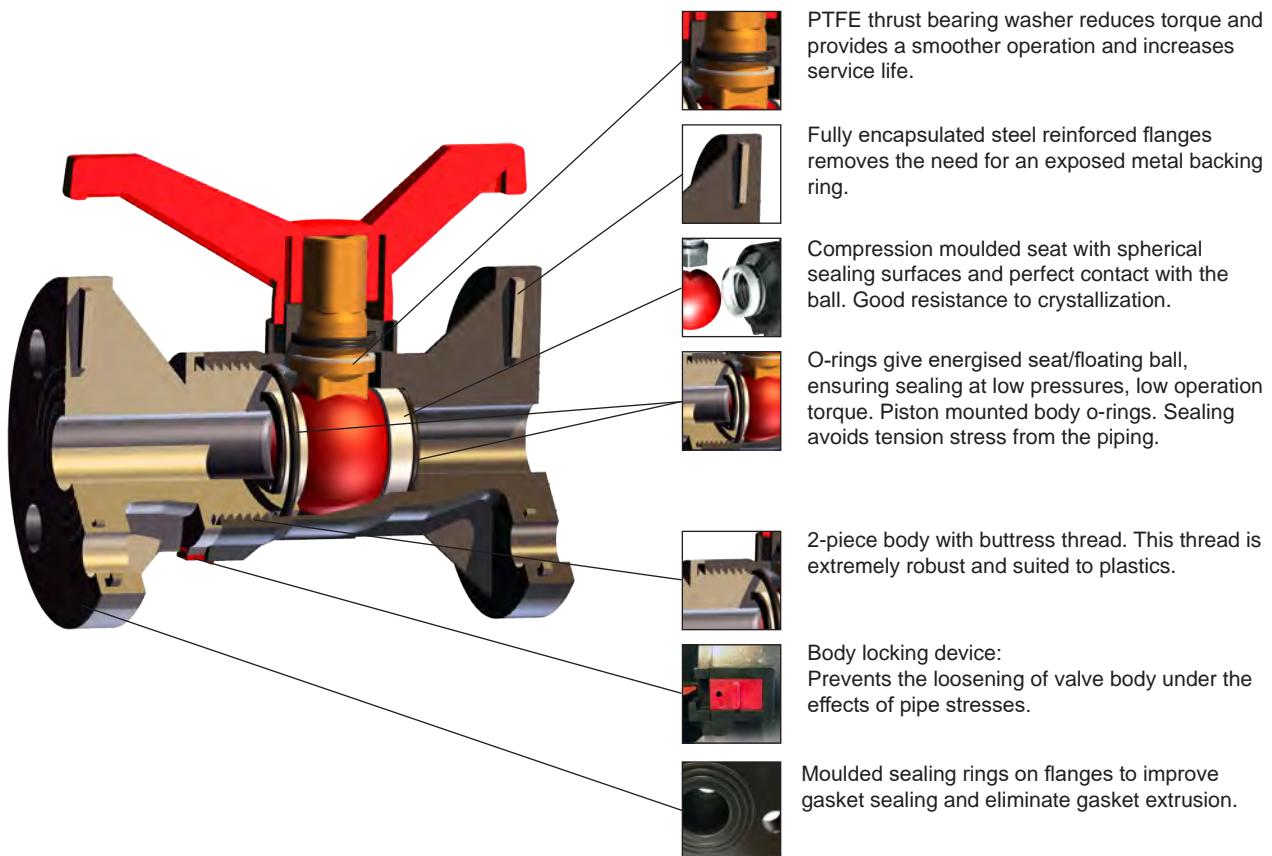

## Features

- Unique designed plastic valve
- Reinforced flanges with encapsulated metal inserts
- A locking key ensures correct flange alignment
- The handle may be removed for safety purposes and can be relocated in one position only
- Built in 1/4 turn handle stops

### Standard:

Conforms to the pressure equipment directive 97/23/CE for gas and liquids group 1 and 2

Face to Face: DIN:EN558, ISO 5752 PN10

## Materials

Body - GRP, PVDF, ASPP  
Seals - EPDM, FPM, FFKM, NBR

## Sizes

1/2"/20mm - 6"/160mm

## Pressure Rating

PN10 / PN16

## Connections

Between flanges, universaly drilled

## Options

Lockable handle  
Handle extensions  
Actuation: Electric / Pneumatic

## Implex Economy Butterfly Valve

**Description:** Wafer style butterfly valve

**Mounting:** In any position

**Maximum Fluid Pressure at 20°C:** Sizes 2"/63mm to 5"/140mm - 10 bar;  
Sizes 6"/160mm to 10"/250mm - 6 bar

**Fluid Temperature Range:** 0°C-50°C

**Construction:**

**Body and Disc:** PVC-U    **Seals:** EPDM

**Shaft:** Stainless Steel    **End Connections:** Flanged

Valve shown flanged style

Optional Valve Support Plates

## General

Sealing material: EPDM / EPDM-PTFE / FPM

Body material: PVC-u - PP - PVDF

Dimensions: DN 15/d 20 - DN125/d140

## Operating Pressure

DN 15 / 1/2" - DN 125 / 5" 10 bar

## Connections

Solvent cement socket (ASTM, DIN, JIS)  
Solvent cement spigot (DN 15 - DN 65)  
(ASTM, DIN, JIS)  
Flange connection (ANSI, ASA, DIN, JIS)  
DN65 with stub flange and backing ring

## Technical Specification

For example:

TYPE PRAHER, DIN 2403

PVC Diaphragm valve T4 DN 15 d20

Solvent cement spigot ASTM

Sealing material EPDM-PTFE

Safety gear wheel

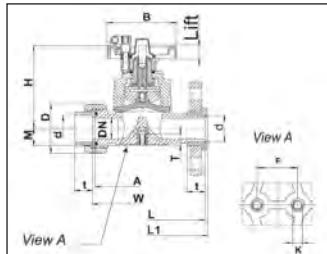

Max. Operating pressure 10 bar

## Features

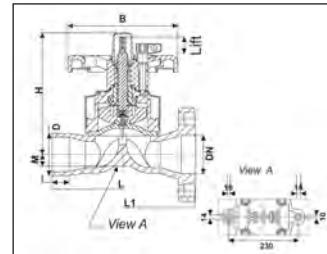

- Safety gear wheel
- Corrosion Resistant
- Maintenance free operation over a long working life
- Suitable for aggressive and dirty media
- Radial installation or removal
- Easy replacement of the diaphragms

## Spears Diaphragm Valve

**Description:** In-line diaphragm valve with position indicator  
**Mounting:** In any position

**Maximum Fluid Pressure at 20°C:** Sizes 1/2" to 2" - 16 bar (PTFE diaphragm - 10 bar); sizes 2 1/2" to 4" - 10 bar; size 6" - 6.5 bar; size 8" - 5 bar

Flanged valves (where size permits) - 10 bar

**Fluid Temperature Range:** 0°C-60°C

**Construction:**

**Body:** PVC-U

**Seat:** EPDM, FPM, PTFE (EPDM backed) or PTFE (FPM backed)

**End Connections:** Solvent Sockets, Solvent Spigots, NPT Female Threaded, Flanged

**Features:** Sizes 1/2" to 2" Solvent Socket valves also include NPT Female Threaded end connections

## Spears Y-Pattern Valve

**Description:** In-line Y-Pattern throttling valve

**Mounting:** In any position

**Maximum Fluid Pressure at 20°C:** Sizes 1/2" to 2" - 10 bar; sizes 2 1/2" to 4" - 6 bar

**Fluid Temperature Range:** 0°C-60°C

**Construction:**

**Body:** PVC-U (grey or clear)

**Seat:** EPDM or FPM

**End Connections:** Solvent Sockets, Reinforced NPT Female Threaded, Flanged

**Features:** Globe valve design provides proportional opening to seating disc travel for more accurate flow control.

Ideal for adjusting flow through variable area flowmeters.

Special semi-rigid seating disc eliminates vibration for more accurate flow control

Y-Pattern reduces flow restriction over standard globe valve

## Praher Type S4 Check (Non-Return) Valve

**Description:** In-line spring cone check valve

**Mounting:** In any position

**Maximum Fluid Pressure at 20°C:** Sizes up to 2½"/75mm - 16 bar;

3"/90mm - 10 bar; 4"/110mm - 6 bar

**Fluid Temperature Range:** 0°C-60°C

**Construction:**

**Body:** PVC-U

**Seals:** EPDM or FPM

**Spring:** Stainless Steel (optional PTFE sleeve)

**End Connections:** Solvent Sockets, Solvent Spigots, BSP Threaded, HDPE Fusion Spigots

## Praher Type S4 Foot Valve

**Description:** In-line foot valve with screen

**Mounting:** In a vertical position

**Maximum Fluid Pressure at 20°C:** Sizes up to 2½"/75mm - 16 bar; 3"/90mm - 10 bar; 4"/110mm - 6 bar

**Fluid Temperature Range:** 0°C-60°C

**Construction:**

**Body:** PVC-U

**Seals:** EPDM or FPM

**Cone:** PVC-U (weighted)

**End Connections:** Solvent Sockets, Solvent Spigots, BSP Threaded, HDPE Spigots

# Praher K4 Check Valve

### Praher Type K4 Check Valve

**Description:** Lug style check valve with universal drilling for mounting between flanges. (DIN, ANSI & BS)

**Construction:**

**Body:** PVC-U

**Seals:** EPDM or FPM

**Pressure rating:** PN10

**Size:** 2"/75mm - 10"/250mm

**Connections:** Between flanges, universally drilled

#### Features

- Excellent Flow Rates
- Wide opening (85°)
- Low pressure drop
- Visual open-closed indicator
- Spring return
- All sizes PN10 rated
- Universal drilling - can be used with DIN, ANSI, BS and JIS flanges

## Hidroten Wafer Check Valve

**Description:** Wafer style flap check valve

**Mounting:** In any position, between flanges to BS 4504 EN1072 PN10

Spring return version for mounting in horizontal position or for pulsating flow

**Maximum Fluid Pressure at 20°C:** 16 bar

**Fluid Temperature Range:** 0°C-60°C

**Construction:**

**Body:** Polypropylene - Glass Fibre Reinforced

**Diaphragm:** EPDM

**Flap:** Nylon (PA)

**End Connections:** Flange mounted (flanges not included)

## Praher Type S4 Electrically Actuated Ball Valve Low Profile

**Description:** In-line ball valve with low profile electric actuator

**Mounting:** In any position

**Maximum Fluid Pressure at 20°C:** Up to 2"/63mm - 10 bar, 2½" - 6 bar, 3"/90mm - 5 bar, 4"/110mm - 4 bar

**Fluid Temperature Range:** 0°C to 60°C

**Construction:**

**Body:** PVC-U

**Seals:** EPDM or FPM

**Seats:** PTFE

**End Connections:** Solvent Sockets, BSP Female, HDPE Fusion Spigots

**Actuation:**

**Material:** Anodised aluminium

**Enclosure:** Weatherproof IP68 Nema 4 and 6

**Limit Switches:** 2 open/close + dry contact 2 open/close

**Override:** By wrench (6mm hexagon)

**Space Heater Included:** 2w (110/230VAC, 24VDC)

**Voltages:** AC 110/230V 1PH, 50/60HZ DC 24V (AC24V)

**Indicator:** Dome type (LED light inside)

**External Coating:** Polyester (TGIC-Free)

**Options:** Not available with low profile Potentiometer unit (1K-Ohm)

**Options:** Not available with low profile Current position transmitter output DC 4-20mA

**Options:** Not available with low profile Proportional control unit, DC 4-20mA, 2-20mA, Output DC 4-20mA

**Options:** Not available with low profile Local control unit

\*Options are only available with the SA-05L enclosure

# Praher Pneumatically Actuated Valves

Visual position indicator as standard. Unit can be fitted with optional switchbox to suit application requirements.

Actuators can be fitted to Ball, Three Way Ball and Butterfly Valves.

All plastic technopolymer housing suitable for aggressive environments. Other housing materials available to order.

Matched valve brackets ensure optimum performance and security. Brackets also available separately if required.

## Praher Type S4 Pneumatically Actuated Ball Valve

**Description:** In-line ball valve with pneumatic operation

**Mounting:** In any position

**Maximum Fluid Pressure at 20°C:** Sizes up to 2½"/75mm - 16 bar; 3"/90mm - 10 bar; 4"/110mm - 6 bar

**Fluid Temperature Range:** 0°C-60°C

**Construction:**

**Body:** PVC-U

**Seals:** EPDM or FPM

**Seats:** PTFE

**End Connections:** Solvent Sockets, BSP Female Threaded, HDPE Fusion Spigots

**Actuation:**

**Housing Material:** Plastic (optional anodised aluminium)

**Air Actuators:** Fail-safe close, fail-safe open, double acting

**Protection:** IP65

**Manual Override:** Optional **Position Indicator:** Included

**Contacts:** Optional limit switch box with 2 mechanical switches

**Pilot Valve:** Solenoid, not included

## Praher Type T4 Pneumatically Actuated Diaphragm Valve

**Description:** In-line pneumatically operated diaphragm valve

**Mounting:** In any position

**Maximum Fluid Pressure at 20°C:** 10 bar

**Fluid Temperature Range:** 0°C-60°C

**Construction:**

**Body:** PVC-U

**Diaphragm:** EPDM, FPM or PTFE (EPDM backed)

**End Connections:** Solvent Sockets, Solvent Spigots, Flanged BS4504 PN10

**Actuation:**

**Housing Material:** Glass Reinforced Polypropylene **Air Actuators:** Failsafe close

**Protection:** IP65 **Manual Override:** Optional **Position Indicator:** Included

**Contacts:** Optional

**Pilot Valve:** Solenoid, not included

# pressure reducing valves

## The function of a pressure reducing valve

A pressure reducing valve is installed in-line. It is responsible for maintaining the downstream line pressure to the pressure set at the valve.

The valve works by responding to changes in the downstream pressure. For example, assume that there are normally two open valves downstream from the pressure regulator. When one is closed, the back pressure will increase. As this happens, the pressure reducing valve would close down to maintain the downstream pressure. When the valve is re-opened the pressure reducing valve would also open up again until the set pressure was reached.

Under operating conditions the pressure reducing valve is always open which means that it is balanced between the inlet pressure (primary side) and the lower outlet/working pressure. At any rise of working pressure at the valve outlet a pressure compensation via the control bore takes place at the area below the diaphragm. The higher working pressure activates the large diaphragm and lifts the piston against the spring force. The flow reduces and the working pressure drops until the balanced condition is reached again. When the working pressure drops this procedure is reversed. The spring force opens the valve seat against the lower pressure force below the diaphragm. The flow rises until the balanced condition is reached again.

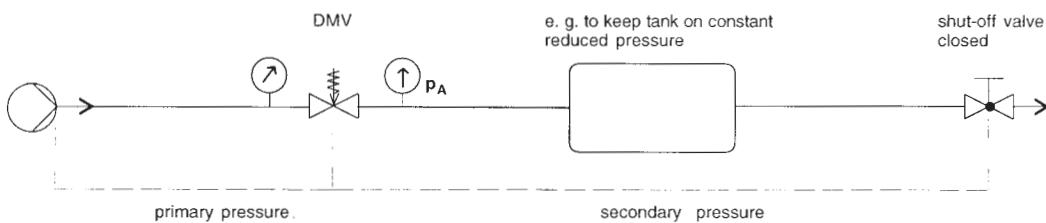

Pre-setting or re-adjustment of the valve set pressure is made by removing the protective cap and by setting the control screw. The counter nut is tightened after final adjustment. When used with neutral fluids, many of the pressure reducing or relief valves can be fitted with a pressure gauge if required.

## Applications for Pressure Reducing Valves

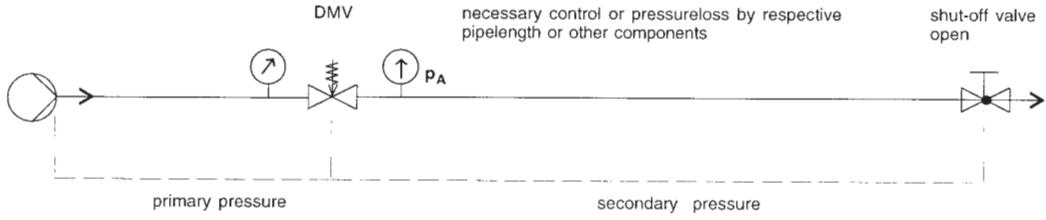

### working condition 1

If shut-off valve opens the working pressure  $p_A$  drops by an opening pressure  $p_O$

### working condition 2

If shut-off valve closes the working pressure  $p_A$  rises by the a closing pressure  $p_S$

## ASV Stubbe DMV 755 Pressure Reducing Valve

**Description:** In-line adjustable valve used to reduce system pressures and to keep the working pressure constant

**Mounting:** In any position

**Maximum Fluid Pressure at 20°C:** 10 bar

**Pressure Setting Range:** 1 to 9 bar

**Hysteresis:** Approx. 0.1 to 0.4 bar

**Fluid Temperature Range:** 0°C-50°C

**Construction:**

**Body:** PVC-U

**Diaphragm:** EPDM with PTFE liner on fluid side

**Seats and Seals:** EPDM or FPM

**End Connections:** Union solvent sockets or solvent cement spigots

**Features:** Adjustable at any time, even during use. Constant pressure control to ± 0.2 bar. Vibration free during operation. Installation is independent of flow direction.

**Options:** Factory fitted pressure gauge available on request.

Setting Range - 1 to 9 bar

# pressure relief valves

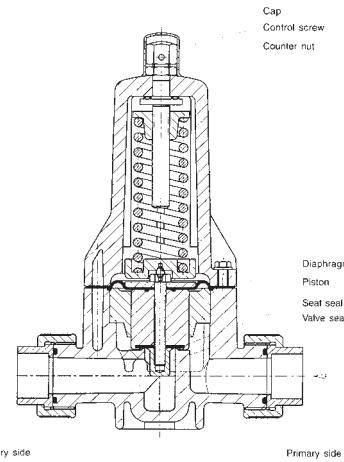

## The function of a pressure relief valve

A pressure relief valve is most often used to protect a system from over-pressurisation, but it can also be used to maintain a constant upstream pressure or even as a non-return valve in certain installations.

Not normally installed as an in-line valve, it only opens when the system pressure exceeds the pressure set against the diaphragm of the valve. When this happens, the excess pressure forces the valve piston off its seat, compressing the spring and allowing fluid to flow through the valve body to discharge. Damping at the valve piston suppresses vibration and fluttering.

The pre-formed diaphragm allows full opening of the valve whilst separating the fluid in the lower body from the bonnet and therefore the atmosphere. The seal is additionally secured by crimped seal O-rings at the diaphragm.

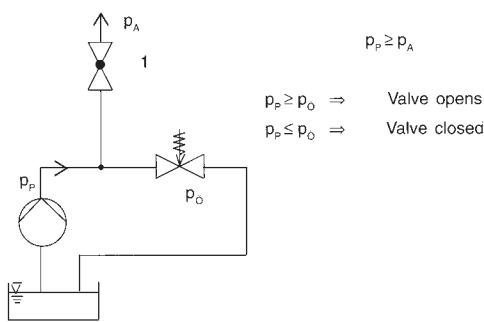

When the system pressure falls back to below the set pressure, the spring forces the piston back into the seat, closing the valve.

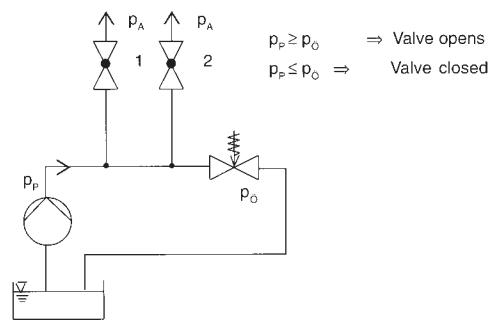

Pre-setting or re-adjustment of the valve set pressure is made by removing the protective cap and by setting the control screw. The counter nut is tightened after final adjustment. When used with neutral fluids, many of the pressure relief valves can be fitted with a pressure gauge if required.

## Applications for Pressure Relief Valves

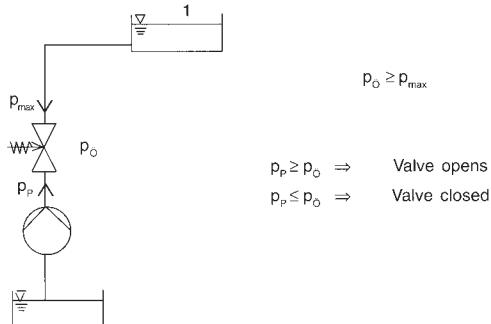

### 1. Constant system pressure

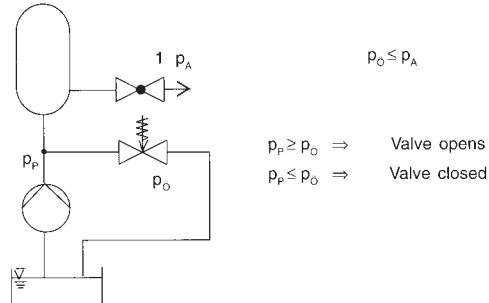

### 2. Consumer 1 and /or 2 opens, pressure relief valve closes

### 3. Pressure relief valve as backflow preventer

### 4. Pressure relief valve as overflow valve: The container pressure or system must not exceed the max. pressure value

X = valve opens

Y = valve closed

pmax = max. pressure

pA = working pressure

pP = pump pressure

pÖ = opening pressure

## ASV Stubbe DHV 712-R Pressure Relief and Non-Return Valve

**Description:** Adjustable pressure relief and overflow valve, back-pressure safe

**Mounting:** In any position

**Maximum Fluid Pressure at 20°C:** 10 bar

**Pressure Setting Range:** 0.3 to 10 bar

**Opening Pressure:** Approx. 0.3-0.5 bar

**Hysteresis:** Approx. 0.3 bar
