

Chlorinated Polyvinyl Chloride (PVC-C) is a modified PVC with additional high temperature strength. It has been developed to handle hot, corrosive liquids at working temperatures up to 100°C, whilst offering the ease of installation of cold solvent welded jointing.

PVC-C is inert to many mineral acids, bases, salts, paraffinic hydrocarbons, halogens and alcohols. It will not support combustion and is rated as self extinguishing. The low thermal conductivity of the material reduces moisture condensation on water lines, and will maintain the temperature of fluids with minimal insulation.

With a similar working temperature range to polypropylene, PVC-C has greater rigidity and lower thermal expansion, making it particularly suitable for above ground process pipework.

application guide

- Temperature range 5°C to 100°C
- Good mechanical strength
- Low thermal conductivity
- Odourless and tasteless
- Rigid pipes are suitable for above ground use
- Resistant to many inorganic chemicals
- Threading possible
- Sizes from 1/4" to 18" and 16mm to 160mm
- No special jointing tools required
- Non flammable and self extinguishing
- Not resistant to organic solvents

about: pvc-c

3

Post-chlorinated Polyvinylchloride (PVC-C) is a highly versatile material that is used for both pressure and drainage piping systems for above and below ground applications. It is a rigid thermoplastic material with good tensile, flexural and mechanical strength, low moisture absorption, good flammability characteristics, exceptional dimensional stability and good tenacity.

PVC-C also has excellent chemical resistance across its operating temperature range of 0°C to 90°C, with a broad band of operating pressures. In addition, because of its long-term strength characteristics, high stiffness and cost effectiveness, PVC-C systems are suitable for a wide diversity of thermoplastic piping installations.

PVC-C systems feature a broad range of pipe sizes, fitting configurations, valve choices and ancillary items.

PVC-C piping systems are joined by solvent cement welding, whilst transition joints can be made using flanges, threaded connections, mechanical fittings, and compression fittings.

IPS supplies a comprehensive range of PVC-C piping systems in both inch and metric dimensions, according to ASTM and DIN standards. Systems are available in inch sizes up to 24" for use as both pressure and ventilation piping systems, and in metric sizes up to 160mm.

General properties of PVC-C

PVC-C is thermally stable in the temperature range 5°C to 100°C, however at low temperatures the impact strength of PVC-C decreases. It is therefore not recommended for use at very low temperatures unless there is no likelihood of the piping materials being disturbed or subjected to impact damage. PVC-C is free from toxic metals thus ensuring that it is physiologically harmless for drinking water and foodstuffs applications.

Some important advantages of PVC-C are:

- Low Specific weight 1.5 g/cm³
- Wide range of applications
- Good chemical and corrosion resistance
- Safe for potable water applications
- Low friction loss
- Self extinguishing
- High mechanical strength
- Low coefficient of thermal expansion
- Rigid and requires less support

| Properties of PVC-C (Average values) | |
|---|----------------------------|
| Property | Value |
| Density | 1.55 g/cm ³ |
| Tensile Strength | 55 N/mm ² |
| Elongation at Break | 3% |
| Impact Strength | 80 J/m (23°C) |
| Modulus of Elasticity (Young's Modulus) | 2500 N/mm ² |
| Coefficient of Linear Expansion | 0.07 mm/m°C |
| Maximum Operating Temperature | 90°C |
| Minimum Operating Temperature | 0°C |
| Vicat Softening Point | > 105°C (VST/B 50) |
| Water Absorption | 0.03% |
| Surface Resistance | Approx. 10 ¹³ Ω |
| Thermal Conductivity | 0.066 W/m · K |
| Flammability | V-0 UL94 |
| Colour | Light Grey |

Characteristics

Chemical resistance

PVC-C has excellent chemical resistance to common industrial chemicals, such as acids, bases and salt solutions. Resistance to sodium hypochlorite solutions is also very good. PVC-C is not resistant to aromatic and chlorinated hydrocarbons, solvents, esters and ketones. The chemical resistance of PVC-C should be checked with our technical department for applications involving varnish, oils or fats, and PVC-C is not recommended for use with compressed air or gases.

Chemical resistance of solvent cement welded joints

The chemical resistance of the joints in a solvent welded piping system are the same as the material itself. However, PVC-C solvent welded joints in systems handling the following chemicals can be degraded and require the use of Weld On 724 solvent cement to ensure chemical compatibility:

Hydrochloric Acid 25%+ concentration

Nitric Acid 20%+ concentration

Sulphuric Acid 70%+ concentration

Hydrofluoric Acid in any concentration

Weathering resistance

With the use of additives such as ultraviolet absorbers, PVC-C systems display excellent weathering resistance to the long-term effects of sunlight, wind and rain. Over time, grey PVC-C will lose some of its colour because of exposure to UV light and it will have slightly reduced impact strength. In extreme cases, the use of insulation or an application of UV absorbent coating such as AGRU Coat or the use of a water based paint will help to minimise the effects of solar radiation.

Electrical characteristics

PVC-C is non-conductive, therefore systems will remain free from electrolytic corrosion. Precautions should be taken to avoid static discharge should any part of a PVC-C piping system pass through an area where explosive gases may be present.

Physiological characteristics

PVC-C piping systems from IPS are free from lead, cadmium or other poisonous heavy metals. They are suitable for use in contact with cold potable water, and are WRAS listed for this application.

Pressure ratings for pvc-c systems

Maximum continuous pressure ratings

Pipes, fittings and valves are designed to operate continuously for 50 years at their maximum rated pressure at 20°C as follows, unless otherwise stated.

Inch sizes - ASTM Standard

PVC-C piping systems manufactured in accordance with ASTM requirements use a 'schedule' system of pressure ratings. Pipes are produced in two different 'schedules', 40 & 80. Under this system the pressure rating of the pipe changes according to the pipe nominal bore size. Reference should be made to the pipe availability guide to verify the pressure ratings available for the sizes required.

Unlike pipe, there is presently no industry standard that specifies a working pressure for fittings. Moulded pipe fittings are manufactured to meet the minimum burst pressure requirements to that of the pipe. In common with the pipe, the pressure rating of the fittings decreases as the nominal pipe sizes increases. The advisory pressure ratings for ASTM fittings is as follows:-

| Moulded Fittings | Size Range | Max. Operating Pressure |
|--------------------------------|------------|-------------------------|
| | 1/4" to 8" | 16 Bar |
| | 10" to 12" | 10 Bar |
| Fabricated Fittings | 4" to 16" | 10 Bar |
| SR Threaded Fittings | 1/4" to 4" | 16 Bar |
| | 6" | 12 Bar |
| Unreinforced Threaded Fittings | 1/4" to 6" | 10 Bar |

Metric sizes

The pressure ratings for PVC-C pipes according to DIN 8079 and PVC-C fittings according to DIN 8063 are defined by the 'nominal pressure' method, **whereby** pipes, fittings and valves are grouped together according to a single nominal pressure rating. The PN rating is the maximum permitted operational pressure in bars calculated at 20°C, for example PN6 indicates a maximum working pressure of 6 bars. According to this method the pressure ratings of metric sized PVC-C pipes and fittings according to the nominal pressure system is as follows:-

| Pipe | Size Range | Max. Operating Pressure |
|-------------------|---------------|-------------------------|
| PN16 | 16mm to 110mm | 16 Bar |
| | 160mm | 10 Bar |
| Fittings PN16 | 16mm to 160mm | 16 Bar |
| Threaded Fittings | 3/8" to 2" | 16 Bar |

solvent cement welding of pvc-c

3

Making a solvent welded joint - joint preparation

- ① Bring the pipes, fittings and solvent cements to the same temperature condition. Ensure that the items to be joined are clean and dry prior to use. Inspect the components for any signs of damage or irregularities. Do not use items that appear not to be correct.
- ② Cut the pipe ends squarely using tool suitable for plastic pipe. A wheel-type cutter is ideal. If a saw is used, a mitre box is recommended to ensure a square cut. Power saws may be used with care.
- ③ Using a chamfering tool cut a 10° to 15° chamfer on the outside of the pipe. This will help ease the pipe into the fitting and minimise the risk of cement being wiped from the fitting during assembly.
- ④ Remove the internal burr from the pipe, and clean up any cutting debris or swarf.
- ⑤ Check the dry fit by entering the pipe into the fitting. The pipe should enter the socket of the fitting to between 1/3 to 3/4 of its depth. This is regarded as a good "interference fit". If the pipe bottoms in the fitting with little interference, extra solvent cement should be used during assembly.
- ⑥ Measure the insertion depth of the socket and mark it on the pipe end. This makes it possible to verify later that the pipe has completely "bottomed out" in the fitting.
- ⑦ Open cans of cleaner, primer and cement ready for use and loosely replace lids to minimise the evaporation of the solvents. Check that the products are in good condition and not "gelled". Cements that are gelled must not be used. Never thin cements.
- ⑧ If needed, remove dirt with C-65 cleaner applied using a clean, lint-free cloth or paper towel.
- ⑨ Using a natural bristle brush or an applicator, apply P70 primer to the inside of the fitting socket then to the outside of the pipe, then apply a further coat to the fitting socket. The primer should be worked into the surfaces of the material. Avoid 'puddling' the primer in the fitting socket. Do not apply with a rag.
- ⑩ **While the primer is still wet**, apply the solvent cement using a natural bristle brush of the correct diameter, or a correctly sized applicator. The solvent cement coating on the pipe end should be liberally yet evenly applied to a distance equal to the depth of the fitting socket. A medium even coat should be made on the fitting socket surface. For diameters 4" (100mm) and above, or if the fit was loose, a second coat should be applied to the pipe.
- ⑪ **While both surfaces are still wet**, insert the pipe into the fitting until the pipe bottoms out fully in the socket. Check that alignment is correct. Hold the joint to prevent pull out for around 20 to 30 seconds (larger sizes may require more time). A bead of solvent cement should be evident around the pipe and fitting juncture. If the bead is not continuous it may indicate that insufficient solvent cement was applied. If this is the case the joint must be cut out, discarded and begun again with new product. Excess solvent cement should be removed from the mouth of the socket using a clean, dry cloth. Replace lids on cleaner, primer and cement cans to prevent the solvent from evaporating.
- ⑫ Handle the newly assembled joint with care until the initial set time has elapsed (see set and cure times table). Following the initial set period the assembly can be handled carefully, avoiding stresses on the joint. **All solvent cemented joints must be allowed to cure fully prior to pressure testing.**

Chamfering the pipe

Removing the internal burr

Measuring the insertion depth

Marking the pipe end

Applying the primer to the pipe

Brush applying cement to the fitting

Brush applying cement to the pipe

Assembly

Wiping away excess cement

solvent cement welding of pvc-c

Set and cure times

The initial set between the pipe and the fitting takes place in a matter of minutes, and joints can therefore safely be handled in a very short time. However, the joint needs to cure before it can be used as part of a pressurised assembly. The time taken to achieve this can depend upon a number of factors, including the tightness of fit as well as the ambient temperature and humidity. In general terms, joints will cure faster on tighter fitting assemblies in warmer, drier conditions, whereas looser fit joints made in cooler and/or humid conditions will cure slower.

As a general guide it is recommended that (wherever possible) joints be left for 24 hours to cure before pressure is applied. However, where this is not possible, consideration may be given to the above factors before determining when joints are put into service. Given average conditions and a working temperature not exceeding 20°C, a safe guide is to allow a cure time of not less than 1 hour for each bar of working pressure for pipe sizes up to 4" (100mm), and 1½ hours for each bar of working pressure for larger sizes.

Large diameter jointing

Solvent cement jointing on pipe sizes 6" (DN 150mm) and larger is a two-person operation. To ensure that primers and solvent cements are applied at the correct speed they should be simultaneously applied to both pipe and fitting. Applying a thorough coating of cement is critical at these sizes both to ensure a good weld and to ease the pipe into the fitting.

For sizes 10" and larger it is recommended to use a ratchet driven pipe puller to ensure that the pipe fully penetrates the fitting. These tools may be hired if required.

Solvent welding of dissimilar materials

As a general guide, solvent welded joints between dissimilar materials are not recommended. Where possible, a mechanical transition joint should be used, such as a union, flange or threaded connection.

If a solvent welded joint is unavoidable, it may (depending upon the conditions) be possible to make a reliable joint provided that a suitable solvent cement is used:

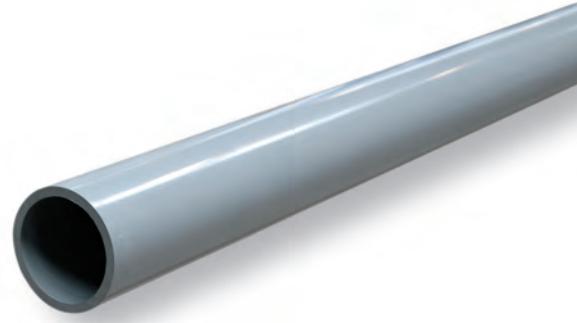

| Materials To Be Joined | Recommended Solvent Cement |
|------------------------|----------------------------|
| PVC-C to PVC-U | Weld-On 724 |
| PVC-C to ABS | Weld-On 724 |

Please note that in all cases we recommend contact with our technical department who will be able to provide assistance with specific applications and on recommended jointing methods.

Please note that a transportation surcharge may be applied on pipe diameters 10" or larger - please enquire for details.

FM4910 Corzan Duct

A range of flame retardant duct pipe and fittings is available to meet the requirements of FM4910. Please enquire for details.

Temperature De-Rating Factors

Pressure ratings for Harvel PVC-C pipework systems are always quoted at 20°C. As working temperature increases, the maximum working pressure decreases by the factor indicated.

| Working Temperature (°C) | Pressure De-Rating Factor |
|--------------------------|---------------------------|
| 20 | 1.00 |
| 30 | 0.92 |
| 40 | 0.81 |
| 50 | 0.65 |
| 60 | 0.50 |
| 70 | 0.40 |
| 80* | 0.26 |
| 90* | 0.21 |

* For continuous use at these temperatures, consult our Customer Services Department.

How much Solvent Cement?

Estimate the number of joints per size, then use this table to calculate how much solvent cement to order.

We always recommend the use of Primer when solvent welding PVC-C. Primer is brush applied after preparation and cleaning of the joint surfaces, prior to the application of solvent cement.

| inch dia | mm dia | joints per litre | |
|-----------|---------|------------------|---|
| 1/4 - 1/2 | 10-20 | 160 | Allow approximately one half the cement quantity in C-65 cleaner and P-70 primer. |
| 3/4 - 1 | 25-30 | 120 | |
| 1 1/4 - 2 | 40-63 | 80 | |
| 2 1/2 - 3 | 75-90 | 60 | Detailed jointing instructions are available on request. |
| 4 | 110 | 40 | |
| 5-6 | 140-160 | 24 | |
| 8 | - | 12 | |
| 10 | - | 4 | |
| 12 | - | 2 | |

What size Brush?

It is important to use the correct size brush to apply solvent cement.

| Pipe Size | Brush Size |
|-----------|----------------|
| 1/4-1 | 8mm round |
| 1 1/4-2 | 25 x 3mm flat |
| 2 1/2-5 | 50 x 10mm flat |
| 6-12 | 75 x 10mm flat |

Pipework Support

PVC-C pipework requires more support than for metallic systems. As working temperature increases, the distance between supports is reduced. For temperatures in excess of 80°C, please enquire.

SCHEDULE 40

| Pipe Size | Support Centres/m | | | |
|-----------|-------------------|------|------|------|
| | 20°C | 40°C | 60°C | 80°C |
| 1/2 | 1.5 | 1.4 | 1.2 | 0.7 |
| 3/4 | 1.5 | 1.5 | 1.2 | 0.7 |
| 1 | 1.7 | 1.7 | 1.4 | 0.7 |
| 1 1/4 | 1.7 | 1.7 | 1.5 | 0.9 |
| 1 1/2 | 1.8 | 1.8 | 1.5 | 0.9 |
| 2 | 1.8 | 1.8 | 1.5 | 0.9 |
| 2 1/2 | 2.1 | 2.1 | 1.8 | 1.0 |
| 3 | 2.1 | 2.1 | 1.8 | 1.0 |
| 4 | 2.3 | 2.3 | 2.0 | 1.2 |
| 6 | 2.6 | 2.5 | 2.1 | 1.4 |
| 8 | 2.9 | 2.8 | 2.3 | 1.5 |
| 10 | 3.2 | 3.0 | 2.5 | 1.7 |
| 12 | 3.5 | 3.2 | 2.6 | 1.8 |

SCHEDULE 80

| Pipe Size | Support Centres/m | | | |
|-----------|-------------------|------|------|------|
| | 20°C | 40°C | 60°C | 80°C |
| 1/2 | 1.7 | 1.5 | 1.4 | 0.7 |
| 3/4 | 1.7 | 1.7 | 1.4 | 0.7 |
| 1 | 1.8 | 1.8 | 1.5 | 0.9 |
| 1 1/4 | 2.0 | 1.8 | 1.7 | 0.9 |
| 1 1/2 | 2.1 | 2.0 | 1.7 | 1.0 |
| 2 | 2.1 | 2.1 | 1.8 | 1.0 |
| 2 1/2 | 2.5 | 2.3 | 2.0 | 1.2 |
| 3 | 2.5 | 2.5 | 2.1 | 1.2 |
| 4 | 2.7 | 2.7 | 2.3 | 1.4 |
| 6 | 3.1 | 2.9 | 2.5 | 1.5 |
| 8 | 3.4 | 3.2 | 2.7 | 1.7 |
| 10 | 3.5 | 3.4 | 2.9 | 1.8 |
| 12 | 3.8 | 3.7 | 3.2 | 2.0 |

Making Threaded Joints

We recommend the use of PTFE tape or Blue 75 Joint Compound for all threaded joints on plastic piping. Please check with our technical department before using any other type of pipe joint compounds, as these can cause stress cracking and lead to failure of the system.

When using PTFE tape, follow the following guidelines:

- Always wrap tape clockwise
- Apply 2 to 3 wraps
- Tighten hand-tight plus 1 1/2 to 2 turns
- Do not overtighten

Clamp Saddle Assembly

Clamp Saddles are quick and easy to assemble. They provide a simple, low cost alternative to a Branch Tee. Ensure that the pipe is de-pressurised and drained prior to fitting.

Pressure Ratings

CPVC saddles are suitable for use at working pressures of up to 16 bar at 20°C for sizes 2" to 4", 13.5 bar at 20°C for size 6", and 10 bar at 20°C for sizes 8" to 12".

Threaded Fittings

We recommend the use of PTFE tape or Blue 75 Joint Compound for all threaded joints on plastic piping. Please check with our technical department before using any other type of pipe joint compounds, as these can cause stress cracking and lead to failure of the system.

Flange Pressure Ratings

Flanges drilled ANSI 150 are suitable for use at working pressures of up to 10 bar at 20°C.

*Note that the stub flange, when used with an appropriate steel backing ring, is suitable for use at 16 bar, for sizes 1/2" to 4", and 10 bar for larger.

Spears True Union 2000 Industrial Ball Valve

Description: In-line double union ball valve with lockable handle

Mounting: In any position

Maximum Fluid Pressure at 20°C: Sizes 1/2" to 2" - 16 bar; sizes 2 1/2" to 6" - 10 bar

All sizes flanged - 10 bar

Fluid Temperature Range: 0°C-80°C

Construction:

Body: PVC-C

Seals: EPDM or FPM

Seats: PTFE

End Connections: Solvent Sockets, Solvent Spigots, NPT Female Threaded, Reinforced NPT Female Threaded, Flanged

Features: Sizes 1/2" to 2" Solvent Socket valves also include NPT Female Threaded end connections. All valves are assembled with Silicon-free, water soluble lubricant.

Option: T-Handle operation on 6" valve

Silicon Free Valves

All Spears valves are assembled with a water soluble lubricant and are "silicon free."

Spears True Union 2000 Industrial Vented Ball Valve

Description: In-line double union ball valve

Mounting: In any position

Maximum Fluid Pressure at 20°C: All sizes 1/2" to 2" - 16 bar; sizes 2 1/2" to 4" -

10 bar; all sizes flanged - 10 bar

Fluid Temperature Range: 0°C-80°C

Construction:

Body: PVC-C

Seals: EPDM or FPM

Seats: PTFE

End Connections: Solvent Sockets, Solvent Spigots, Reinforced NPT Female Threaded, Flanged

Features: Designed for Sodium Hypochlorite and other chemical applications
Vented ball equalises internal fluid pressure assuring proper valve operation and long life.

T-Port

Spears 2000 Vertical T-Port & L-Port Ball Valve

Description: In-line vertical 3-way T-port & L-port ball valve with lockable handle and union ends

Mounting: In any position

Maximum Fluid Pressure at 20°C: Sizes 1/2" to 2" - 16 bar; sizes 2 1/2" to 4" - 10 bar

Fluid Temperature Range: 0°C-80°C

Construction:

Body: PVC-C

Seals: EPDM or FPM

Seats: PTFE

End Connections: Solvent Sockets, NPT Female Threaded, Flanged ANSI 150

for L-Port insert L i.e. 4723L1-005C

Additional L-Port Options

The Spears 2000 Vertical L-Port Ball Valve is also available at additional cost with:
- Double L-Port Function
- Triple L-Port Function

Please enquire for details and prices.

Spears Gate Valve

Description: In-line gate valve with non rising stem

Mounting: In any position

Maximum Fluid Pressure at 20°C: Sizes up to 2" - 14 bar; 3" - 10 bar; 4" - 6 bar

Fluid Temperature Range: 0°C-80°C

Construction:

Body: PVC-C **Gate:** Polypropylene **Seals:** EPDM or FPM

Bonnet: PVC-C except 4" which is Stainless Steel 316

End Connections: Solvent Sockets, BSP or NPT threaded, flanged

Spears Butterfly Valve

Description: Wafer style butterfly valve

Mounting: In any position, between flanges to ANSI 150

Maximum Fluid Pressure at 20°C: 10 bar

Fluid Temperature Range: 0°C-80°C

Construction:

Body: PVC-C

Disc: Glass reinforced PVC-C

Seals: EPDM or FPM

Shaft: Stainless Steel 316

End Connections: Flange mounted (flanges not included)

Spears Diaphragm Valve

Description: In-line diaphragm valve with position indicator
Mounting: In any position
Maximum Fluid Pressure at 20°C: Sizes 1/2" to 2" - 16 bar (PTFE diaphragm - 10 bar); sizes 2 1/2" to 4" - 10 bar; size 6" - 6.5 bar; size 8" - 5 bar. All flanged valves - 10 bar
Fluid Temperature Range: 0°C-80°C
Construction:
Body: PVC-C
Seals: EPDM, FPM, PTFE (EPDM backed) or PTFE (FPM backed)
End Connections: Solvent Sockets, Solvent Spigots, NPT Female Threaded, Flanged
Features: Sizes 1/2" to 2" Solvent Socket valves also include NPT Female Threaded end connections

Spears Globe Valve

Description: In-line globe throttling valve

Mounting: In any position

Maximum Fluid Pressure at 20°C: 10 bar

Fluid Temperature Range: 0°C-80°C

Construction:

Body: PVC-C

Seats & Seals: EPDM or FPM

Stem and Plug: PVC-C

End Connections: Flanged ANSI 150

Features: Fully serviceable, excellent flow regulating characteristics.

Suitable for vacuum use.

Flanged ANSI 150

Spears Y-Pattern Valve

Description: In-line Y-Pattern throttling valve

Mounting: In any position

Maximum Fluid Pressure at 20°C: Sizes 1/2" to 2" - 10 bar; sizes 2 1/2" to 4" - 6 bar

Fluid Temperature Range: 0°C-80°C

Construction:

Body: PVC-C

Seats & Seals: EPDM or FPM

End Connections: Solvent Sockets, Reinforced NPT Female Threaded, Flanged

Features: Globe valve design provides proportional opening to seating disc travel for more accurate flow control

Special semi-rigid seating disc eliminates vibration for more accurate flow control
Y-Pattern reduces flow restriction over standard globe valve

Spears True Union Check (Non-Return) Valve

Description: In-line cone check valve **Mounting:** In a vertical position
Maximum Fluid Pressure at 20°C: Sizes up to 2" - 16 bar;
 sizes 2½" to 6" - 10 bar

Fluid Temperature Range: 0°C-80°C

Construction:

Body: PVC-C **Seals:** EPDM or FPM

End Connections: Solvent Sockets, NPT Female Threaded, Flanged

Option: Silicon-free

Spears True Union 2000 Industrial Ball Check Valve

Description: In-line ball check valve

Mounting: Vertical

Maximum Fluid Pressure at 20°C: Sizes 1/2" to 2" - 16 bar; sizes 2 1/2" to 6" - 10 bar

All sizes flanged - 10 bar

Fluid Temperature Range: 0°C-80°C

Construction:

Body: PVC-C

Seals: EPDM or FPM

End Connections: Solvent Sockets, Solvent Spigots, NPT Female Threaded,

Reinforced NPT Female Threaded, Flanged

Features: Sizes 1/2" to 2" Solvent Socket valves also include NPT Female Threaded end connections. All valves are assembled with Silicon-free, water soluble lubricant

Hayward Simplex Basket Strainer

Description: In-line strainer with serviceable basket filter

Mounting: Vertical

Maximum Fluid Pressure at 20°C: 10 bar

Fluid Temperature Range: 0°C-80°C

Construction:

Body: PVC-C

Strainer Basket: PVC-C or 316 Stainless Steel

Strainer Mesh Sizes: PVC-C: 1/32", 1/16", 1/8" or 3/16";

Stainless Steel: 20, 40, 60, 80, 100, 150, 200, 325 Mesh

Seals: FPM

End Connections: Solvent Socket, NPT Threaded or Flanged

Gauge: Optional

Duplex Style Available.
Please enquire for prices.

Spare PVC-C Basket

New Style

| Size | Code | Price |
|-------------|-----------|----------------|
| 1/2, 3/4, 1 | BS21001/_ | |
| 1 1/2, 2 | BS22001/_ | |
| 3, 4 | BS24001/_ | on application |
| 6 | BS26001/_ | |
| 8 | BS28001/_ | |

To specify the mesh size, add to part number, e.g. 3" basket c/w 1/32 mesh = BS103001/32

Spare Stainless Steel Basket

New Style

| Size | Code | Price |
|-------------|---------|----------------|
| 1/2, 3/4, 1 | BS710/_ | |
| 1 1/2, 2 | BS720/_ | |
| 3, 4 | BS740/_ | on application |
| 6 | BS760/_ | |
| 8 | BS780/_ | |

To specify the mesh size, add to part number, e.g. 2" basket c/w 60 mesh = BS702060

* Note that the new style strainer requires the additional use of a PVC-C adaptor

Optional Extras

| Size | Code | Price |
|-----------|-----------|----------------|
| 1/2 - 1 | BS710(XX) | |
| 1 1/4 - 2 | BS720(XX) | |
| 2 1/2 - 4 | BS740(XX) | |
| 6 | BS760(XX) | on application |
| 8 | BS780(XX) | |

To replace the plastic basket with one stainless steel basket, add the basket price to the strainer price
(XX) Replace with mesh required. For 100 mesh replace (XX) with 100

Drain Kits

Ideal for controlled draining on basket strainers. Includes ball vale with locking lever, drilled ball and nipple piece.
Please enquire for details.

Spears Y-Strainer

Description: In-line strainer

Mounting: In any position

Maximum Fluid Pressure at 20°C: 10 bar

Fluid Temperature Range: 0°C-80°C

Construction:

Body: PVC-C

Seals: EPDM or FPM

Strainer: PVC-C or Stainless Steel - 8, 12, 20 or 30 mesh

End Connections: Solvent Socket, Flanged ANSI 150 or NPT reinforced female threaded

Pipework Support

PVC-C pipework requires more support than for metallic systems. As working temperature increases, the distance between supports is reduced. For temperatures indicated by * continuous support is required.

PN 16 PIPE

| Pipe Size | Support Centres/m | | | | | | | | |
|-----------|-------------------|------|------|------|------|------|------|------|--|
| | 20°C | 30°C | 40°C | 50°C | 60°C | 70°C | 80°C | 90°C | |

| 160 | 2.00 | 1.90 | 1.85 | 1.80 | 1.75 | 1.60 | 1.40 | 1.10 | |

Temperature De-Rating Factors

Pressure ratings for Durapipe PVC-C pipework systems are always quoted at 20°C. As working temperature increases, the maximum working pressure decreases by the factor indicated.

| Working Temperature (°C) | Pressure De-Rating Factor |
|--------------------------|---------------------------|
| 20 | 1.00 |
| 30 | 0.86 |
| 40 | 0.71 |
| 50 | 0.56 |
| 60 | 0.43 |
| 70* | 0.33 |
| 80** | 0.25 |
| 85*** | 0.21 |
| 95**** | 0.21 |

Durapipe pressure de-rating factors are based on a design life of 50 years except for:

* 15 years ** 5 years *** 3 years **** 1 year

Consult our technical department to discuss higher pressures and the effect on design life.

How much Solvent Cement?

Estimate the number of joints per size, then use this table to calculate how much solvent cement to order.

Allow approximately one half the cement quantity in C-65 cleaner.

Detailed jointing instructions are available on request.

| Pipe Size | Joints per litre |
|-----------|------------------|
| 16-32 | 300 |
| 40-63 | 120 |
| 75-90 | 50 |
| 110-160 | 15 |

What size Brush?

It is important to use the correct size brush to apply solvent cement.

| Pipe Size | Brush Size |
|-----------|----------------|
| 10-32 | 8mm round |
| 40-63 | 25 x 3mm flat |
| 75-140 | 50 x 10mm flat |
| 160 | 75 x 10mm flat |

Brushes

| Size | Code | Price |
|--------------|---------|-------|
| 4mm round | L151/4R | 1.93 |
| 8mm round | L151/8R | 2.71 |
| 25x10mm flat | 565/1 | 2.98 |
| 50x10mm flat | 565/2 | 6.83 |
| 75x10mm flat | 565/3 | 17.96 |

Durapipe VKD Double Union Ball Valve

Description: In-line double union ball valve with lockable handle

Mounting: In any position

Maximum Fluid Pressure at 20°C: 16 bar

Fluid Temperature Range: 5°C - 95°C

Construction:

Body: Corzan® PVC-C

Seals: FPM

Seats: PTFE

End Connections: Solvent Sockets

Features: Safe blocked unions, multi-functional handle, easy actuator mounting platform and bracketing points included

Options: Electric or pneumatic actuation

Praher Type S4 Ball Valve

Description: In-line double union ball valve with lockable handle

Mounting: In any position

Maximum Fluid Pressure at 20°C: Sizes 20mm-63mm 16 bar

Fluid Temperature Range: 5°C - 95°C

Construction:

Body: PVC-C

Seals: EPDM or FPM

Seats: PTFE

End Connections: Solvent Sockets

Features: Lockable handle and tagging point included
